**If you own an Apple IIc,
you'd have to add all this**

**to match the versatility, expandability
and higher intelligence of the
new Commodore 128**
(and it costs less too).

The new Commodore 128™ personal computer is breakthrough technology at a breakthrough price. It outshines the Apple® IIc in performance capability, performance quality and price. It is expandable to 512K RAM while the IIc isn't expandable at all.

And the new Commodore 128 has a numeric keypad built right into its keyboard that makes crunching numbers a lot easier. And the Commodore 128 has graphic and sound capabilities that far exceed those of the Apple IIc. But the most important news is that

the new Commodore 128 jumps you into a whole new world of business, productivity, education and word processing programs while still running over 3,000 programs designed for the Commodore 64.™ That's what we call a higher intelligence.

COMMODORE 128  A Higher Intelligence

 **commodore**
COMPUTER
Keeping up with you.

Editorial

Commodore is moving up market, and so are you. It's all about power, and how to get more of it. Businesses need it, but strangely enough, so do the hobbyists want it. More memory, unlimited disk storage, faster access times, greater processing ability - are all being unleashed, be it in small amounts, upon the entire computing spectrum.

With the AMIGA 500 priced at under \$1000, graphics and sound that wouldn't have been imagined one year ago, are available to the low end of the computer market. You and me.

Multi-tasking power is taking home computing into new realms. But the whole show is leaning heavily on software. The technology is here, and the market is eager to see it all come together.

Dealers are importing products directly from the US, Germany and Great Britain. But if the 500 sells in the quantities Commodore is predicting, the demand will far outweigh their ability to import limited quantities of items.

The Commodore 64 too is enjoying a new lease on more serious computing ability. GEOS is being well supported, with half a dozen new titles available over the next two months. New printers, more powerful peripherals and even word of memory expansion are clear indications that the whole Commodore market is under going a radical step toward more serious applications.

Not spreadsheets, databases or wordprocessing - although they are indeed playing a part in the shift - but in

uses that are only just being discovered. Music, Art, Communications, Video, Advertising, Publishing and the list grows. It's an exciting time we plan to keep up with, so keep reading!

RAM RUMBLINGS

Commodore announces Club Amiga

Following the outstanding success of the Amiga computer, Commodore has announced a national organisation to help Amiga users make the most of their computer.

CLUB AMIGA has been launched to provide special support and discounts for Amiga owners.

Commodore Special Projects manager, Mr Craig Tegel, who developed the concept said,

"The Amiga is a special computer and Club Amiga will be a special service giving members product security and support."

Club Amiga will give members up-to-date information on the latest developments on the Amiga - both with software and hardware - as well as regular product reviews.

Members will receive quarterly newsletters about the Amiga as well as a twelve month subscription to *Amiga World Magazine*, which is dedicated to Amiga software and hardware developments and distributed internationally.

When joining, members will receive a special kit containing a personal membership card and key ring which will entitle owners shortly to special discounts and offers, not available to people outside Club Amiga.

The kit comes with three demonstration disks, *Superbase Personal*, *Deluxe Video Construction Set* and *Pagesetter*. A recent edition of the publication *Amiga World* is also included.

As a special Bonus Offer for new members, each will receive free a copy of the *Textcraft* or *Graphicraft* program worth \$99.

The total value of the newsletters, magazines and software give aways contained in the Club Amiga kit is nearly \$200.

However the substantial discounts and offers which will be made to club members over the next 12 months will amount to many hundreds of dollars.

Mr Tegel said, "Club Amiga will allow us to support Amiga users to a level they deserve."

"I am extremely confident it will be a success from the start. There have been more than 10,000 Amigas sold in Australia since it was launched less than a year ago, and I believe their owners will take advantage of this generous offer to form Club Amiga."

Commodore expects Club Amiga will initially have a membership of 3,000 and this will grow steadily as more Amigas are sold.

Club Amiga has a joining fee of \$50 plus an annual subscription fee of \$100.

Membership of the club is open only to Amiga users and anyone wishing to join should apply to Mr Tegel at Commodore's Australian headquarters, 67 Mars Rd, Lane Cove 2066.

Amiga User Association

The Australian Amiga User Association was formed in 1986 by Commodore Amiga users to cater for the interests of owners of the new Amiga range of computers.

The aims of the Association are the interchange of knowledge on hardware, software, education, business and all related applications, so as to promote full and further development and use of the Amiga range of computer systems.

The Association has extensive connections with both Commodore and overseas Amiga user groups. This allows the dissemination to members the latest information relating to hardware, software or any other Amiga relevant subject.

Open days are held periodically consisting of discussions on news, demonstrations/reviews of the latest in hardware and software, as well as talks

and lectures on programming or many other Amiga related subjects, all held in the atmosphere of a social function for members and their families.

Members are posted bi-monthly newsletters which contain the latest in news, articles, reviews, and other topical information relating to the Amiga, gathered from the association's above-mentioned sources.

A 24 hour multi mode (V21,22,23) Bulletin Board Service is operated by the association on (047) 58 8006 which is accessible to subscribing members with limited access to visitors. This BBS features full facilities for private and public messages, news and the exchange of Public Domain Software.

For further information or details on membership etc. please write to: Australian Amiga User Association c/- Post Office Penrith, NSW 2750. Or contact the president or secretary on (047) 39 6182, or treasurer on (047) 51 4143. Alternatively the Association can also be contacted via Viatel message page 473534880.

Commodore Connection

A new service is now operating on Viatel called the Commodore Connection. The service provides apart from information a multi-user bulletin board, telesoftware, a news and magazine section, and more.

The news service is updated as the news comes in, and is second only to *The Australian Commodore Review*.

The telesoftware section will contain public domain and commercial software for the Commodore 64, 128 and Amiga personal computers.

A lack of information on Commodore servicing has been a problem until now, but this and more general information on Commodore equipment will be available for use free of charge to members.

This service may be found on page *6917# of Viatel.

LETTERS

LETTERS

TO THE EDITOR

Dear Sir,

I'm writing to you in response to an article appearing in your magazine Vol 2 No 2 of February, 1987, titled "Rich Man, Poor Man, Beggar Man, Pirate". I, like many others, are concerned with the pirating of computer software, and in essence agree with the article you wrote.

However, I do resent the inference in your test as 'User Groups' being the vessel for pirating.

I am a member of the Southport Commodore User Group which is situated on the Gold Coast, Queensland, and would like to state that one of the main priorities in our club, is that club members are not allowed to copy commercial software.

I have enclosed a photocopy of a page from our magazine "The Computer News". The section referred to is concerning an ex-member who is no longer welcome at our club and a warning to other members who may be contemplating similar activities. As you can see from the text, we refer to previous articles referring to existing club policy of no copying.

I have also enclosed a copy of our club's constitution which states the ideals and operations of our club. As you can see, the User Group has been established with specific purposes, and has set its own ideals to fulfill.

I think that if you contacted other groups, you would find that they hold similar policies to us, and

strive to fulfil the same type of ideals.

I strongly feel that rather than accuse almost everybody, seeking the co-operation of the User Groups would be a more logical step, rather than upsetting them. I think your section on how to spot pirates should be amended to swap clubs and not the legitimate user groups.

I would like to offer to your magazine, space in our own publication to reprint any articles or warnings to people who may copy software. I would also like to extend this offer to any software companies whom you may liaise with.

Rick Bone

Editor, Computer News

Excerpt from Computer News

A few weeks ago I rang up one of our members to let him know that his 'Subs' were due. I was in for a shock! This guy would have to be one of the regular attenders of our club (up to the subs running out) and he informed me that he wouldn't be renewing his membership. When I asked the reason why he told me he had joined another club on the Gold Coast where they all got together to do COPYING of programmes and that was why he had left our club, BECAUSE WE WON'T LET THEM COPY COMMERCIAL PROGRAMMES!

It seems as though the club policy of NO COPIES! is working. Maybe we can get rid of a few more.

ED: It is commendable to see a user group with such a responsible

attitude, it is only a shame that there are not more similarly minded. In the article you refer, to reference was made to user groups in connection with the piracy problem.

"More often than not the modern day pirate's clipper is the 'User Group'..."

"...they sometimes turn into full scale swap clubs where even pre-release version of programs are readily available to all and sundry."

Please note that the intended meaning was that where mass distribution of pirated software is a problem, the medium used is often that of the user group, occasionally for financial gain. In no way do I believe that most user groups indulge in such activity - only that most pirates enjoy the fluid surrounds of user group meetings to provide an outlet for their programs.

Addressing this problem is difficult, especially from our position. To all those User Groups who provide a fine service for their members, my sincerest congratulation on a job well done. To the rest - I echo all my previous sentiments.

I do not condemn the copying of software as such - something that we all do to some hopefully small extent. However, what kills the market for software and thus the continuing life of the industry is the mass distribution of pirated material. Especially where this is for financial gain do I take offence - an illegal pastime that is now being attended to.

Micro Accessories of S.A.

THE UTILITY SPECIALISTS

Amiga

Following the outstanding success of the Amiga computer, Commodore has announced a national organisation to help Amiga users make the most of their computer.

CLUB AMIGA has been launched to provide special support and discounts for Amiga owners.

Commodore Special Projects manager, Mr Craig Tegel, who developed the concept said,

"The Amiga is a special computer and

amount to make Mr Tegel us to support deserve.

"I am extremely success from more than Australia since a year ago, and take advantage from Club Amiga.

Commodore initially have and this will grow sold.

After enjoying considerable success since its release we have now made some improvements to "QUICKDISC+" to maintain its position as the best value in the disc "speed" utility cartridges.

FAST LOAD (now 5-7 times normal speed). Works with majority of protected software. Can be switched in and out from the board.

IT SAVES at 7 times normal speed.

Format takes just 20 seconds. **Backup** copies an entire disc in minutes (not protected).

Fast File Copier for selective copying at HIGH speed. Now copies files up to 248 blocks long. **Protected DOS commands** (DOS) takes for easy use of the disc. **9.5 (RETURN)** will LOAD and a directory without over-BASIC. **SHIFT RUN/STOP** will 0.8.1 etc. **Very, very**

Centronics software (user port) with user port centronics cable.

A RESET switch is fitted. (We have found this to be "unstoppable" - it even preserves the tape buffer).

NO MEMORY IS USED by this cartridge, it is totally "transparent" and uses special switching techniques.

"128" and 1570 compatible in 64 mode.

PLUS MANY MORE USEFUL FEATURES TO MAKE YOUR 1541 FAR MORE FRIENDLY TO OPERATE.

ONLY \$49.95

When reviewing "Quickdisc+" Commodore Horizons said "A MUST FOR EVERY 1541 OWNER".

NOW EVEN FASTER

ANTIKNOCK DEVICE

This package incorporates a new drive stop for your 1541 that will end for good the dreaded "woodpecker". The fitting is very easy and a test program is provided to check the fitment. Helps prevent future alignment problems and makes your drive purr with satisfaction.

DOLPHIN

Like everyone that has had the pleasure of seeing operation you will be amazed by both the speed and use. It is compatible with the majority of Commodore software, speeding up both the program loading and saving. Fitting requires the insertion of two sub assemblies in the 1541 and one in the '64/128. This does not entail soldering, although a small amount of work with some machines.

ONLY \$169.95

If you require further information please send SAE. Operates with the CBM 64 or 128 in 64 mode.

Made under licence to EVESHAM MICROS
Manufactured in S.A.

Offers subject to availability

The Commodore Association are the interchange of knowledge on hardware, software, education, business and all related applications, so as to promote full and further development and use of the Amiga range of computer systems.

The Association has extensive connections with both Commodore and overseas Amiga user groups. This allows the dissemination to members the latest information relating to hardware, software or any other Amiga relevant subject.

Open days are held periodically consisting of discussions on news, demonstrations/reviews of the latest in hardware and software, as well as talks

THE BEST IN BACKUP METHODS IS NOW EVEN BETTER

NOW HANDLES PROGRAMS THAT LOAD SUBSEQUENT PARTS

"Freeze Frame MKII" must have been the world's most powerful and most successful backup product. The success of "Freeze Frame" convinced, is the most advanced and easy to use backup product in the entire world.

Now the "MKIII" version has moved "Freeze Frame" well ahead of the "opposition". As well as its unfailing skill in handling every memory resident program available for testing up to 1st July 1986 it will now transfer from tape to disc the vast majority of programs that load subsequent parts.

FEATURES

- TAPE TO DISC
- DISC TO DISC
- COMPLETELY SELF CONTAINED, NO EXTRA SOFTWARE NEEDED
- FILES COMPRESSED FOR ECONOMY OF STORAGE SPACE
- 128/128D COMPATIBLE IN 64 MODE
- TAPE TO TAPE
- DISC TO TAPE
- RELOAD INDEPENDENT OF THE CARTRIDGE
- NOW HANDLES PROGRAMS THAT LOAD EXTRA PARTS
- PROGRAMS RESTART FROM THE POINT BUTTON IS PRESSED

OPERATING "FREEZE FRAME"

"Freeze Frame" is simplicity itself to use. It is cartridge based so is simply plugged into the cartridge port. When the computer is switched on a message is displayed, pressing "RETURN" will clear the computer back to the normal start up screen. Software can now be loaded from tape or disc completely as normal. The latest version of "Freeze Frame" will, to the best of our knowledge, allow ANY software to load and run normally (unlike competitive products).

"Freeze Frame" can be brought into operation at any convenient point by pressing the button on it. You can then do one of three things...

1. Pressing "D" will save a working version of the program in memory to a formatted disc. This version will include an auto booting very high speed reload (many programs reload in less than 30 secs).
2. Pressing "S" will save to disc with a standard reload speed that can be used by non 1541/70/71 drives U.S. spec. machines, etc., but perhaps more importantly by most fast load cartridges and systems. Use "Dolphin DOS" to reload anything in less than 10 secs. (Also suitable for U.S. spec. machines.)
3. Pressing "T" will save a working version of the program in memory to tape. This incorporates a high speed reload at approx. 2400 baud.

IT'S AS SIMPLE AS THAT

ALL PROGRAMS SAVED WITH "FREEZE FRAME" CAN BE RELOADED INDEPENDENTLY OF THE UTILITY

ONLY \$99.00

Owners of earlier versions can return them and upgrade for \$15 + PP.

SERIOUS WARNING: THIS IS AN EXPENSIVE AND IT CAN BE LOST

information a multi-user bulletin board, telesoftware, a news and magazine section, and more.

The news service is updated as the news comes in, and is second only to The Australian Commodore Review.

The telesoftware section will contain public domain and commercial software for the Commodore 64, 128 and Amiga personal computers.

A lack of information on Commodore servicing has been a problem until now, but this and more general information on Commodore equipment will be available for use free of charge to members.

This service may be found on page *6917# of Viatel.

HARDWARE

Amiga 500 - Commodore's next market boomer

Thomas J. Rattigan has just put the fizz back into Commodore, with the release of the Commodore Amiga 500, priced at a mere \$999. Andrew Farrell pops the top on this newly positioned home machine.

When the Amiga 1000 was launched in Australia a little over six months ago, it was heralded as one of the most forward home machines available in the market at the time. However, as time progressed it became apparent that despite the technical advancement that had been made in the Amiga, it just wasn't cracking it in the real world of price/performance conscious buyers. Something had to be done to make Amiga more acceptable in the business market.

So the Amiga 2000 was built - and that's another story. Of more importance was the high volume home market where initial sales, upgrades and second machine purchases were being lost to competitors because of the Amiga's higher price tag.

Commodore set out to make the Amiga more affordable. They started by redesigning the circuit board to accommodate a lower chip count made

viable due to their vast wealth of experience in designing made-to-order chips.

A newfangled casing was drawn up that would be simpler to manufacture. A simpler power supply using the regular brick type scheme replaced the Amiga 1000's reliable switch mode unit. And finally the composite video circuit was replaced with an unpretentious monochrome circuit.

These changes have made it possible to reposition the Amiga into a new area of the market place not unlike that originally entered by the Commodore 64 five years ago.

Kickstart 1.2, the Amiga's supervisor or operating system, is now built into ROM rather than being loaded off a disk when you first switch the unit on. The

*all that,
w me?"
w it did*

containing the
ring-bound
us forms and
m, and foam.

my C64, the

Operation

Having loaded the terminal program, otherwise known as *GP Term*, from disk at turbo speed thanks to the built in fast DOS, control of the various operations is achieved by way of the function keys.

Videotex pages may be captured, an auto-dial menu edited and saved, baud rates fine tuned, and programmable keys defined. And that's just the start. I would compare the facilities of this package with *VIP Terminal* only that this one is

integral keyboard is a little different from its predecessor, however, still boasts the complete complement of function keys, cursor keypad and numeric keys. A more spacious layout is also much welcome.

Standard RAM size is 512K, expandable up to 1Megabyte on board via a slot accessible on the machine's underside. The positioning of this slot has meant that many Amiga peripherals will now no longer connect directly to the side of the unit as they did with the Amiga 1000. However, by way of a short cable, and perhaps some form of expansion unit, it would be possible to add all existing Amiga add ons including hard disks, Sidecar and the like.

The 500 produces RGBI and RGBA output for use with high grade monitors, whilst the monochrome output can be used to drive cheaper units. An external adaptor will also be available to allow the 500 to be used on a standard UHF colour television or colour composite video device such as a VCR.

At this time there are no plans for a Commodore 64 emulation card, despite rumors to the contrary. Interestingly, the same has been achieved using software, however this proved to be rather sluggish when used with some of the Commodore 64's high speed games - which goes to prove that the 64 really is quite a smart

letter box for a week (promotional material included for your appraisal, free

you're using version 1.0.

HARDWARE

computer.

Will the Amiga 500 make up for lost ground in the home computer stakes? My guess is an affirmative yes, providing that third party software houses start to pay more attention to the Amiga. At the moment new software packages are arriving in a trickle, but what the Amiga needs is some strong well written and promoted programs that can really bump the image of this machine out of the vertical market slow and into a more readily accepted position.

Tony Cuffe, Product Manager at Commodore Australia, promises me that such programs do exist. If they arrive in the market place in the month of May, they will be accompanying many Amiga 500 sales out the dealer doors. If not, we may see the 500 having difficulty gaining the level of acceptance it deserves.

Commodore Chief's Challenge

Commodore International President, Mr Thomas J. Rattigan, believes computer retailers in Australia will be increasingly challenged to survive what he believes will be tough times ahead. However, Mr Rattigan said Commodore with its extensive and varied range of computer products will give many of these retailers an opportunity to stay competitive and profitable.

"The industry has undergone major retrenchments in the past two years in both the United States and Europe and I believe Australian retailers will start feeling the pinch in 1987," he said.

Mr Rattigan sees the scenario this way:

"The local industry has seen a slowing in unit sales growth and modest growth, at best, is

expected in the near future.

"There has been increasing margin pressure as retailers reduce prices to remain ahead of their competition.

"This is happening in a country which has too many computer outlets; 16 per cent of the U.S. store level, but only 2-3 per cent of U.S. unit sales.

"Added to this is the influx of clone computers from Asia with no real distinction versus one another, other than price, and you have a volatile situation.

"If you like, you are reaching the situation where everybody is selling vanilla ice-cream, with sales increasingly determined by price alone."

Unless retailers here deal with products such as the Amiga 2000, that offer proprietary technology, and

that can be distinguished other than in value alone, then the result will be a major shake-out in the industry, possibly leaving only half the number of computer shops which exist today, said Mr Rattigan.

So Commodore expects more hard times, just when we thought things were sorting themselves out.

Mirror Mirror on the wall, Who's the Fastest of them All?

Dolphin DOS is reputedly still the fastest disk operating system available for the Commodore 64. Andrew Farrell takes a second look.

Could it be that the humble 1541 disk drive, much haunted by a miserably slow Disk Operating System, has finally come of age? After a thorough month or so of testing (extended use during the wee early hours of the morning) and extensive comparison tests (does coffee, tea or Milo have the worst effect when spilt on the device?) I have the answer - and it is an affirmative yes.

Dolphin DOS has taken the Commodore 64 and once sluggish disk drive out of the bracket of slow drive running into the world of real quick, very fast and amazingly agile.

Despite the availability of a dozen comparable wordprocessors, I still use *Easy Script*. Perhaps I'm just lazy, but that is what I use. As a result I have what you might call a stripped back version that is a mere 58 disk blocks long. This rids me of those annoying flashing colours on the original load, and various other seasonal wasting pastimes - such as checking the antiquated disk protection.

Using Dolphin DOS, this particular program loads in just on three seconds. This is barely enough time to gather my thoughts into a writing frame of mind, let alone begin to wonder what the disk drive is doing.

However, after several loads, one does begin to marvel as to what method of techno-trickery is used to attain these amazing load speeds. Is there a little man in there cranking the wheel of my 1541 a

tad faster than usual? Perhaps a giant magnetic field inside my computer produces an effect similar to that in the movie *Philadelphia Experiment* - sucking everything off my disk straight into a giant vortex along the serial cable.

When you are so attuned to the 1541's slowness, Dolphin DOS is certainly a pleasant surprise. The speed

a instant speed up by a factor of eight. However, Dolphin DOS also puts into use a variety of other methods used to increase disk access time.

These include reducing validation time, reducing delays originally designed for reliability and other more complex operations. The result - a speed up factor of 10 - 15 times on some operations, with others improving by a factor of about six!

Installation

The package is not to be connected up by the faint hearted. If you fret at the sight of bared circuit boards, flinch at the sound of an IC being pulled gently from its socket - then please do not read these next few paragraphs.

Start by opening the lids of your Commodore 64 and 1541 - you're going to be doing some major heart surgery on both - don your surgical mask and take a long flat blunt instrument in your right hand. Carefully

lever out the Kernal ROM in your 64 - I used a butter knife, not recommended, but always readily available.

Next remove the 6502 and 6522 chips from your 1541 - connect the heart bypass machine and check the pulse and heart rate - only continue when they've stabilised (yours, not the computer's). Now carefully insert the various replacement boards/ROMs, additional cables, switches and the like. Now replace the 6502 and 6522 IC's into the respective sockets on the piggy back board.

Okay, so that was the abridged version of the operation. Comprehensive easy-to-follow instructions are included with the unit - and if you follow them carefully, you should have no trouble getting everything up and running. Some Commodore 64s do not have a socketed

up is produced by use of a parallel cable between the 64's user port and a piggy back board inside the 1541.

The effect can be likened to the difference between several thousand people trying to get into the Royal Easter Show through one turnstyle, and the increased flow produced by opening an additional seven gates. Dolphin DOS is your additional seven gates - giving a total of eight paths for information to pass between the disk drive and computer.

Normally information is sent one bit at a time. Every character you see on the screen needs eight bits to tell the computer exactly which character it is. These eight bits together are called a byte. Using a parallel cable we can send one whole byte at a time rather than just one bit. Theoretically this should result in

board, which means that the IC's are soldered directly to the PC board.

If that is the case, you will need to purchase a socket (less than \$2.00) and have the old ROM desoldered and the socket mounted in its place. This job normally takes about 15 minutes at the most.

Connection on the 128 is a little more complex due to the additional shielding and casing that tends to make the device rather awkward to fit without some form of nibbling tool. I have not seen a 128 version as yet, but they do exist, so ask at your local store as to availability.

Operation

Dolphin DOS doesn't just speed matters up and leave it at that. You now have additional commands via the function keys and keyboard that will make disk access commands such as OPEN 15,8,15 a thing of the past. Apart from the increase in LOADING and

SAVING, disk formatting now takes under 20 seconds, with the option to format up to track 40 if required.

Shift-RUN STOP will load and run the first program in the disk, and you no longer need to include a device number at the end of a LOAD or SAVE command - thus LOAD "program" will suffice rather than the clumsy LOAD "program",8.

Verification is also faster - to prove it, leave the lid off your disk drive and watch the speed at which pressure pad moves in and out of the disk. There is an option to allow device changes, so the unit will operate with two drives.

For machine language freaks, like myself, there's also a simple but useful monitor. Program LOADs also identify the LOAD start and end address in HEX during loading. Additional screen editing commands have also been included - with clear to end of line, start of line and similar such commands. The CTRL key pauses a listing rather than just slowing it down and so the list goes on.

Conclusions

Dolphin DOS is an excellent product reflecting the state of the art when it comes to improving your 1541 drive. Many aspects have been considered, and the unit does not take over your system to the extent that it becomes clumsy and difficult to remove. Two switches totally disable Dolphin DOS, allowing fussy programs to LOAD and RUN correctly.

Good documentation and consistent operation over the past months have led to my confidently recommending it to many people. You may have some small problems with heating in badly ventilated areas - so keep in mind that a fan may be required to provide the necessary heat dissipation.

Dolphin DOS is distributed by Micro-Accessories and sells for a recommended retail price of \$169.00.

The Star NX-10 Printer

Looking for a new printer? Eric Holroyd checks out this third party one.

I've had my Star Gemini 10x for over two years and have been more than satisfied with it so I was pleased to have the opportunity to review a later model Star printer known as the Star NX-10.

This has many features not found on earlier printers such as easy front panel control of many of the things you'll want to do when printing a document.

Features selectable from this "touch-panel" include:

- Left and right margin settings
- Forward/backwards micro-feed
- Two types of self-test
- Panel mode *
- Form feed to top of next sheet
- Italic mode
- Hex dump mode
- Print mode selection **

* Panel mode locks out control-commands sent by your word processor or other program, allowing you to print another copy of your document in, say, condensed print (136 columns) without any changes to the command string.

** Mode selection includes 80/96/136

(this means characters per line on normal paper), or in other words normal size/elite size/condensed size characters, OR you can select NLQ which give normal sized print in Near Letter Quality printing.

The NX-10 is very easy to get up and running as the instruction book is reasonably easy to read, plus there's a very handy plasticised "help" card to keep on the desk, and a sticker of Control Panel commands which you can stick in a convenient spot for reference.

This printer uses a cartridge ribbon which just drops into place and by simply moving the print-head sideways (with the printer off-line) the ribbon is automatically fed into place and you don't get your hands dirty! Replacement ribbon cartridges are readily available at around \$16 or you can get a refill, called a Zip-pack, for around \$7 or \$8 which you can fit into the cartridge yourself. It's all explained in the instruction book, which I found to be easier to understand than some other instruction books I've had (or maybe it's me that's finally learning something!).

Being a non-Commodore (or third-party) printer, the Star NX-10 needs to be connected to the Commodore 64 with a suitable interface so that they can "speak the same language". Having used the Xetec Super Graphics Senior interface on the Gemini 10x I opted for the same thing on the Star NX-10 and it worked like a charm. The Xetec interface has many features which the NX-10 takes full advantage of, like downloadable fonts, a further NLQ font and an 8K printer buffer for example.

The Star NX-10 comes fully equipped with a tractor-feed for continuous paper, or you can easily feed single sheets in manually for special jobs. It sells for around \$540 from most printer and computer outlets.

DOUBLE HEIGHT PRINT
lower case double high
QUAD HEIGHT PRINT
lower case quad

HARDWARE

My review model was further equipped with an automatic sheet feeder, which is great as you just stack an inch or so of paper sheets in the feeder (much like feeding the office photo-copier) and from there on the feeder does it all. Press the print button and a sheet is fed in, printed and ejected into a holder on top of the printer. At around \$165 it's a very useful printer accessory and I loved it.

The Star NX-10 supports all normal word processing functions like: horizontal and vertical tabbing, underlining, superscripts and subscripts, text-centering and aligning etc etc and has some great extra features as well. On the Star NX-10 you can actually back-space and over-print one character on top of another: also if you wish to print the figure 0 (zero) without the slash mark through it you can: then you can produce block graphics (if you wish to design your own logo for example): in addition you

can set up a "macro" definition which will do up to 16 things with one command.

There are also character-sets for 11 different countries built into the NX-10 and they're easily accessed by sending control codes: furthermore with very little effort you can print in Double-size print (that's both double height and width!) and in Quad-size print which is double-sized Double. Great for eye-catching headings etc.

This Star printer also allows you to use **proportional** printing which makes your document look even better. Normally a printer allows the same space for a letter 'm' or 'w' as it does for an 'i' or an 'l' when really these last two letters need less space vertically, or in other words some letters need "proportionally" less space than others. A simple control code puts the NX-10 into proportional mode either from your own programs or from within your favourite word processor

and it's all taken care of automatically.

The NX-10 was compatible with all the graphics printing programs I tried on it including: *Print Shop*, *Printmaster*, *Doodle*, *Koala Painter*, *Certificate Maker* etc and did a good job on all of them. It ran all of my *Easy Script* files which had embedded commands for the Gemini 10x and I thought it was a nice printer to work with.

If you're looking for a good all-round printer for word-processing and graphics printing then this could be just what you need.

The Star NX-10 Printer is distributed by Star Micronics, Unit 7/25 George St, Homebush, NSW 2140. (02) 736 1144. Xetec Interface is from The Printer Specialists, 31 Elgin St, East Gordon, NSW 2072. (02) 498 3333.

BEHIND THE SCREENS - GAME OF THE MONTH

Short Circuit

by J Mark Hunter.

This was one of the best movies that had come along in a while at its release midway through '86, and it was a great pleasure reviewing it for *Home Computer GEM*. Then Kevin at Ozisoft was suddenly on the line and with contagious excitement let me know it had now been released as a game.

And it really is exciting, because it is so much like the movie, and for a change - a program that fits the cover.

Numero Fivo, a robot zapped by a heavenly bolt of terrific voltage and moving into robotic life. Moving, out of the Nova Robotics laboratories and into downtown disaster. You now get to steer the little metallic mayhem monster through his wayward perambulation and fight the forces of ignorant cohorts set on a one-way course of insane destruction, just because Number Five is Alive!

S.A.I.N.T. (Strategic Artificially Intelligent Nuclear Transport.) That's Number Five's desk job. And your job is to complete the frazzled adventure before some turkey within the screen does it for you.

At opening frame you find Number Five inside the Nova Robotic buildings. You must manoeuvre him around the lab and adjacent offices in a search for helpful artifacts, hardware and software needed to activate your laser and jump mechanisms and find the technical manual to help you build the decoy robot in the second part of the game. You start off with the ability to search and manipulate objects. You search an object by facing it, selecting SEARCH as your current program and pressing fire. You will then be informed of any objects found, and if you press fire again it will allow you to take the item.

Then there's a phase known as

UTILIZE. Pressing fire you can use the item you have or moving into JUMP mode allows #5 to ...jump. In this section of the game you must solve puzzles and outwit security guards and then make your bid for freedom outside the walls of the complex.

The toughest part of the first section is a time when you're moving through a wash room area and suddenly another S.A.I.N.T. robot is there to block your way. This is a frustrating endeavour, I assure you. The guy moves when you do, jumps when you do, turns in the same direction. If anybody out there finds a fast, effective way to beat him, please let me know. For now, I suggest you try crossing him towards the front of the screen and head off the back wall at a diagonal, moving right. You'll eventually get it though, don't worry, but it's a phenomenal hurdle.

Once outside, your chase begins. Pursued by security forces ordered to kill and other Saint Robots programmed to deactivate you, the odds build up. They don't give up the hunt, and the only hope for survival is to build a decoy robot to be destroyed in your place. And here's an interesting point - there's such a thing as a "code of robotics." You can only stun your human pursuers and causing death to living creatures will deplete your conscience energy. If your conscience level is totally used you automatically deactivate. Then, you find your van before the Nova chopper arrives and you survive.

It's a fantastic achievement as far as a computer game story line goes. There's so much to do, and so much fun action. The

Number Five screen character is identical to the movie representation and moves exactly the same way. The *Short Circuit* game music is an eerie blend of frantic organ play and *Close Encounters* tempos and harmonizes perfectly with the excellent movability of the robot along a very fine graphic scroll-scape.

Definitely a pleasurable investment, and one that you won't get sick of for a long, long time.

GAME REVIEW

Behind The Screens

Leviathan

On the package they stress: "A space game inspired by the ZZ Top video *Rough Boy*." Give me a game inspired by *Legs* and I'll be happier. But until they do, *Leviathan* will do just fine.

The graphics and sound are superb, though the objective, even with its influence by rock and roll, is totally

ordinary. A mission to seek and destroy enemy alien ships. You have zones, and each zone must be crossed, *Leviathan* destroying all the enemy ships in each zone within the allotted time.

If successful you move on to the next skill level and cross on to the next zone.

You get limited fuel, unlimited missiles, five lives plus a bonus life every 5000 points and extra fuel every

Repton 3

Meet Repton, a cross between Rockford of *Boulderdash*, and the Gillman. And the game, a cross between *Boulderdash* and a walk in the park. Central Park, NYC.

And what'd they say 'bout *Reptons One and Two*?

Package promotion: "Our original game was immediately acclaimed as a refreshing new concept: a game requiring dexterity to complete its arcade style elements, and clear, logical thinking to solve its strategic puzzles."

Repton 2, even better, and now - numero three, and though I'd never been

introduced to any of the *Repton* series before, I believe the quotes are true, because this time around I'm positively hooked.

Repton 3 has a total of 24 game screens. In order to complete the game you have to carefully determine your routes through each screen in turn, with the aim of defusing the time-bomb by passing over it. Ah, but three steps first...collect all diamonds (including those concealed in safes or cages);

collect the golden crown; and kill monsters. Your normal working day.

Each screen has a time limit and, if you do not complete the screen within its time limit, the time-bomb will explode and you will lose a life. Repton can, however, travel backwards in time because whenever a time capsule is collected the time-bomb's clock is reset. A thoughtful gesture.

Each screen comprises a series of puzzles. Many of these are interlinked and you may have to solve a number of small puzzles to enable you to tackle a large one. The puzzles may, in some cases, seem impossible - but they are completable eventually. It's all in the

Scooby Doo

The sheer weight of the Scooby-Doo cartoon series, its longevity and popularity, was enough to push me into play of the computer game. The misfitted adventures of "the gang", Velma, Shaggy, Daphne and Fred, and of course, the no-spine canine himself - Scooby Doo.

Loaded into adventure, the game sets itself inside the walls of a lonely castle used by a mad scientist for his base, conceiving ill-designed experiments amongst the beakers and benches. The gang's van, the Mystery Machine, has arrived at the ruined castle

to enable the group to traverse the cobbled corridors and explore the shadowed reaches of this abandoned royal retreat.

Suddenly, they're snatched by the madman's heavy-weight thugs but good ol' Scoob manages to scamper away. Now, you, the player, join our hairy friend in the search for his comrades throughout this dungeon of impending doom.

A typical scroll-walking adventure game along a seemingly endless hallway of doors and staircases, *Scooby-Doo in the Castle Mystery* ranks itself into the higher brackets of value entertainment

GAME REVIEW

new city, and every new rock tune.

The landscapes are nicely perceived, with a simulated shadow below your cruiser as you fly, and dangerous O rings smoking out of strange-fangled smoke stacks to cause your easy obliteration.

The scrolling landscapes fly, for a refreshing change - diagonally, and sometimes you even disappear behind things as you fly, that's how real it is!

The handling, though, is not the best,

pretty awkward, actually, and even though it flips and turns well, you easily lose control and it wallows their in mid-space like a St. Bernard trying to get comfortable in a Mini. But remember that the music is hot and this makes the difference in recommending it as a good, good game.

amount of time you're willing to ascribe to the challenge.

As in *Boulderdash*, you've got rocks as a major contention happening within the bowels of the dirt south of your shoe soles. They fall if unsupported and if they fall on your head they don't stop till you're wearing your Reeboks on your chin. Yes, crudely, we're talking Squish City. We're talking death. And then the rest of this underground commuter rush that must be avoided, the skulls, monsters, fungus and other such fatal bruises. And when an egg falls there sure ain't nothin' to yoke about. When it cracks a monster hatches out. The only way to eliminate these gooks is to drop a rock on their

heads.

Repton 3...yes, this is the start of the wrap-up...is quite an excellent game and definitely one that got me heading back to it after the others had hit the Yawn County graveyard. It's set out with a seemingly endless scrollscape and keeps you occupied with a surplus of challenges.

The music is monotonous though, like the organ player dropped dead on the keyboard and they forgot they still had the record button depressed.

Aside from that, *Repton 3* as a sequel has certainly excelled its program lineage and is worth a tap into your fun supplies some lazy afternoon.

because of its fine graphics and music. The simulated Scooby Doo theme song has been well adapted to the computer and provides a light-hearted backdrop to the compelling play at hand.

Though, the operative word is 'typical'. Scooby being manipulated through the doorways and up the staircases by the joystick, and biffing the opposing attackers along the way with a press of the fire button and a slap of his paw. Yet, we've certainly become comfortable through the years with these goofy cartoon characters, and watching them on the screen is a lot nicer than a strange intruder.

Arcade Action

by John Hatchman

Well, after a short holiday up the coast I am back to write my column once more. Man, it's been really top weather up there too. Oh well, better unscramble my mind to tell all you avid readers about some fabuloso new games set for release soon and some that have already arrived.

Some of the new releases I will be chatting about include *Gauntlet*, *Paperboy*, *Aliens*, *Space Harrier*, *Scooby Doo* and *Galvan*!

Last month I wrote about *Yie Ar Kung Fu II* and I seem to have my facts mixed up. The truth is that two *Yie II*'s have been released, one going by the name of *Shao Lin's Road*, and the other, *Yie Ar Kung-Fu II*. Well, I have had a whiff of *Yie Ar II* and it riddles its predecessor *Yie Ar Kung-Fu*. Not bad, hah!

Gauntlet

Well, right off the top of my head (sound familiar), *Gauntlet* is available now in the shops with its 128 level disk version and its 80 level tape version. But there is a problem with the tape version

- it tries to load level 81 off the tape - but it doesn't seem to be on the tape, what a pity eh!

Anyway, *Gauntlet* has been out in the arcades for some time now, and there is talk of *Gauntlet II* around. For you deprived kiddies who haven't seen it yet, it is a one or two player, multi dungeon, run around a maze and shoot-em-up style of a game. If you didn't get all that, it is a game where you search for an exit and battle off the evil scum that floats around, dying to zap your health to zero.

Aliens

Oh my god, they're in the room. But where are they? 10, 8, 6 metres. Run, they're in the roof, watch out, duck, quick run. Now does this sound familiar to anyone? Yes, that's right, it's the new game called *Aliens* released by Activision. Yes, this movie - cum - game has so many levels of blasting and running to keep any gamester jumping with fright and fear.

The not so finished product I saw had a neat opening screen with heart throbbing music and the movie - cum - computergame credits flashing up in turn with the music. Once you progress past the first intro, you are given the status of all your men, and a choice to enter an entrance code to play any part of the game.

But the trick is, you have to complete each part to find out the hidden mission codes. The first part requires you to steer the dropship to safety on the colony, and it is no easy task. After twenty or so futile attempts I finally made it to the ground, and to make the job easier for all you gamesters out there, the first code is 2727H. Go to it.

The second part of the mission requires you to locate the exits and get your four men from below out of the nuclear reactor. You have on screen, all the players' heart status, an early warning monitor and a motion detector. Try and get just one of your men out! The next level requires you to shoot off the attacking aliens while down the bottom of the screen your other men are melting through the door.

Not such an easy task. Now for the last pattern I reached. You must run around the underground network to find the right tunnel to the dropship. Try it yourself now and buy the game.

Pushbike Classic

Watch out for this classic conversion from Elite. The aim of the game is to ride your pushbike along the street and avoid all sorts of moving obstacles and throw the papers in the mail boxes and break a few grave stones and windows, and if all that sounds easy . . . then wait till you get to the end of each level, you get a bondy special.

There is an obstacle course in which you have to ride along and jump the jumps and throw your papers at the targets. Well, that should keep you busy for quite a while finishing the days of the week. Sounds great, it is great, so look out for this arcade classic.

NetComm believes Commodore owners have waited long enough.

It seems Commodore owners are a patient lot. While other PC users were discovering the delights of communications, you had to wait for someone to design a modem just for you. And while the others were enjoying the convenience of auto dial and auto answer, you were left waiting again.

But now, with the introduction of NetComm's Modem 64/128 for Commodore, your wait is over.

The Modem 64/128 is a full-feature, two-speed auto modem compatible with all existing commercial and public domain software, including Commodore 1650 software.

It operates at 300/300, 1200/75 and 75/1200 baud.

It comes complete with Videotex and Terminal software and even a VIATEL subscription form.

It provides auto dial, auto answer and auto disconnect features you'd only expect to find on much more expensive modems.

All modem features are software controlled, with a full 7-LED display reporting all operational modes.

And it comes complete, with Telecom approval, ready to plug in and run.

All this, plus NetComm's legendary reliability, for less than \$300, excluding tax.

So now, what are you waiting for?

ARCADE ACTION

Space Harrier

Space Harrier is a well known arcade game. It has hydraulic movement and the screen to blast away with. Now it's your turn to try it, the computer game is a great conversion. Pity no movement, but what do you expect, a bonus hydraulic chair or something? Another conversion is the long awaited *Scooby Doo*. It has the music of a one fingered pianist, the graphics of *Black Whyche* and the plot of a spaghetti western. Yes, it does sound like I'm going to give it a bad rating, but alas I'm not. Why, I hear you ask? Because when I saw Shaggy squashed in a bottle or something like that, I got so addicted to the ghost-busting I was hooked on saving my best buddy Shaggy. But play before you buy, just to satisfy your own tastes.

Galvan was a classic that has taken its time to reach Ozi Land, and what a shocker of a game it turned out to be. It doesn't have a very wide variety of patterns (all similar). But just because I didn't like it, you may just like the game play, so have a geeza anyhow.

If you bought *Dragons Lair* and loved it, here comes *Dragons Lair II*, the escape from Singe's Castle. Yes, it has another eight action packed screens to whet your appetite. It has that fine load it while you play it loader, which seems to be quite a success over here and in England.

Also there is a whiff in the wind of *Bombjack II*, the follow-up to the hugely successful *Bombjack*. Yes, more action packed screens ready for your pleasure of play.

MEGAROM

Hacker Pack V3.0

For Commodore 64, 64C, & SX64

From the authors of MULTI-KERNEL and MEGA-KERNEL comes their final product tuned to perfection. This 32K MEGAROM now includes one of the most compatible and fastest speed enhancements available for Commodore 64 computers. Also included with this package is a very comprehensive 20+ command DOS WEDGE incorporating many new instructions like device changeover, un-new, and no-knock. Then at any time you can enter a complete machine code monitor/line assembler-disassembler, with 25 plus commands. Not to forget the Memory Copier, Cartridge Copier, and Hi-Res Screen Grabber, all dumped to disk in Blinding Speed.

And if this is not enough, we also include a utility disk which contains Bootmaker, File Copiers, Cartridge Cracker, Disk Back-up, and over 110 entry points.

Equivalent utilities could add up to over \$200 worth of your hard earned money, but L.N.G. LABS offers this Outstanding Package to you for only

\$69 + shipping and handling fees.

SWITCHES

Each of these carefully hand-crafted, reliable switches allow the user to reset, cartridge reset, and pause their Commodore 64's. At only \$10 each they represent true value for money.

Special offer - all 3 for Just \$25

MEGADOS V3.0

from the AUTHORS of SUPERDRIVE MKII DOS

This is a 32K drop-in DOS CHIP for SKAI, CFC, FSD, TAIWAIHO, 1541C, 1570 and 1571 disk drives. This MEGA-DOS chip offers an incredibly versatile range of facilities, while maintaining 100% software compatibility. You can now have an amazing 783 blocks free on your disks and your disk drive will automatically cater for these disks upon insertion. This DOS will format your disks in under 25 seconds, allow up to ten times faster track accessing, provide optional write verify and number of Header Gap Bytes. But best of all you no longer have to worry about SAVE* @: problems because we've taken the liberty to KILL all the BUGS!

And to top this MEGA package off, we will toss in our BITS'N'PIECES disk, containing over 40 top quality assorted programs and routines.

Only \$29 plus shipping fees.

1541 version \$35 plus shipping fees.

PLATINUM COLLECTION

A believably incredible compilation of the most exciting Graphics and Sound Demonstrations available anywhere. Written by Hackers and Programmers from all corners of the Globe, these programs literally stretch the C'640 chip set to the limit. Each of the TEN DISKS comes complete with L.N.G. LABS special menu program to provide convenient loading.

Only \$41 + shipping charges

HARDWARE

The SlimLine Replacement Case for Commodore 64

by Eric Holroyd

Shortly after Commodore released the C-128 in Britain the renowned English programmer, Tony Crowther (*Blogger, Potty Pigeon, Gryphon, Kettle* etc.) was quoted in one of the English Commodore-related magazines as saying that he loved the keyboard of the new C-128 so much that he was using it most of the time in 64 mode as it was "so much more comfortable to use".

I know exactly what he meant, as I have both an early model 64 and a 128-D and there is a big difference in typing on the two keyboards. Quite honestly I've preferred to use the 128 in 64 mode for my *Easy Script* work but as of today I'm back on the good ol' 64 because I've upgraded it with one of the super new Slimline replacement cases from Micro Accessories in South Australia.

It's a very simple job to fit the innards from the old 64 into the new case as the kit comes complete with a set of very easy-to-follow instructions, and if you do what most computerists don't do and read the instructions first, you'll have the job done whilst the kettle's boiling.

The only tool you need is a Phillips screwdriver and there's just over a dozen or so screws to be removed all told. You take the case apart, take out the printed circuit board, put it in the new case and then screw it all together again. There's a definite sequence of operations which are shown beautifully on the instruction pamphlet and it's all very easy. I managed it okay, so the rest of you should be able to do it!

There are "blanks" moulded into the rear of the new case which you simply punch out to take your reset switch etc, or if you have Dolphin Dos fitted (it's made by the same company) there's a space for its switch to be fitted straight into also.

The Slimline case is bigger in the "front-to-back" direction, but not as high

as the old 64, and it looks very much like the new C-64C or the C-128 keyboard. It has ventilating slots in the section behind the centre group of keys, and either side of the vents is a moulded recess measuring 9mm by 5mm which is exactly the right depth to drop in a little home made "cheat-sheet" with the instructions from your latest game or utility. A piece of cardboard cut to the right size will stay in one of those recesses beautifully. I believe that one of them may have been designed to accommodate the upcoming numeric key-pad which Micro Accessories promise for the near future, and which would enhance your 64 even further.

The keyboard on my refurbished 64 now slopes down at a much better angle, and being very low now it lends itself better to touch typing without that "tiring of the wrists" which I used to feel on the old style 64 before switching to 128/64 mode as I explained above.

The result is that as well as having a nice new look to the 64, I've already found it to be much better to work on. A quick phone check of a few friends who've bought the new case established the fact that they're all feeling as happy and pleased as I am about it.

One thing though: I live in one of those outer Sydney suburbs where the temperatures are always much hotter in summer (and colder in winter!) than the city and surrounding areas so I'm very conscious of anything that could suffer from the heat as much as I do myself. With this in mind I drilled a couple of extra ventilation holes in the bottom of the case before putting it all together. Just a precaution on my part and it's up to you whether you follow suit on that score.

The main thing is though that you'd be doing yourself a favour by getting the new case and you can feel good at the same time about buying Australian made goods as this item is entirely Oz designed and manufactured. It's being exported to UK as you'll see in the ads in the English magazines. Yet another instance of Australian know-how leading the rest of the world!

All in all this is a fine product and one which I can heartily recommend to all 64 owners as a present to themselves for having the good sense to buy the 64 in the first place.

The SlimLine case is distributed by Micro Accessories of SA. Unit 8 Hewittson Rd, Elizabeth West, SA 5113. (08) 287 0191.

Disk Magazine

It would be fair to say that we have come a long way toward producing a professional magazine on a disk, especially with the launch of the new Windows System. Andrew Farrell explains.

What started out as a fleeting idea, has made its way to Issue Six. Not without glitches along the way, but we made it nevertheless. At last a major improvement has been made, one that I feel you would be interested to know about.

Windows System

We have added on the front end of both the Number Five and Six issues a window driven menu system. This allows selection of magazine articles, and the various programs, simply and quickly. If you have used an Amiga or Apple Macintosh, or even GEOS, you will already be familiar with the type of operating system.

At the moment the windows software is by no means comparable with any existing packages, but the principles are the same. And more importantly, the potential is there. We are committed to continual development of the disk

magazine, and already a prototype exists which is up to ten times faster than the first version, and has all the desktop functions fully implemented.

In the future wordprocessors, databases and similar packages will be written that also work with the windows package - existing software may also be

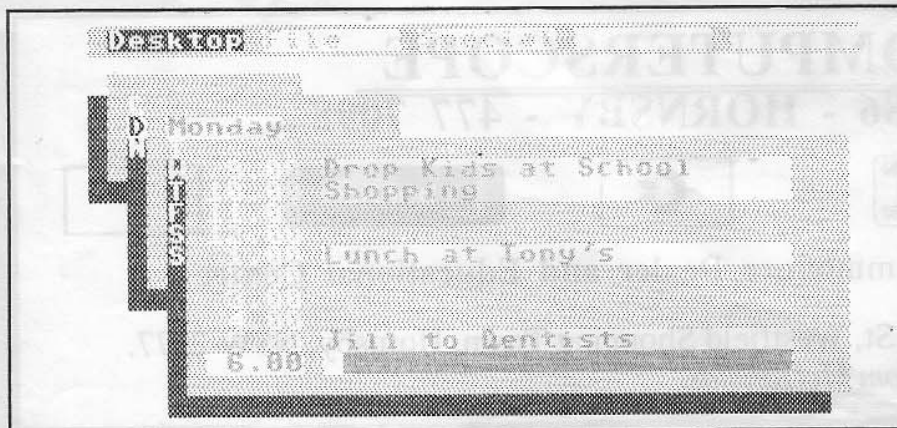

modified for compatibility. Unlike GEOS, Windows is text based, so it is not as flexible when it comes to working with graphics. However, for efficient, simple and speedy processing, Windows will be streaks ahead.

At this stage an open architecture has been used. There is no disk protection, and no fast loaders.

From the number seven issue you will be given an option to select a fast loader, or perform a normal load. In this way, external disk operating systems such as Dolphin DOS will have maximum effectiveness.

Operation

To use the Windows desktop, use the cursor keys and return key to move about and select options. In future we will be adding joystick control as well, however for now, the keyboard will more than suffice.

SOFTWARE

In future development of Windows, we would like to include your ideas of what the ideal desktop environment should include. At the moment there is a simple week by week diary, clock and notepad. Version 2.2 of the desktop will automatically maintain these on your current boot disk, and also allow you to swap from disk to disk. At the moment each desktop only works on that particular disk magazine. I trust you will find these improvements a further reason to continue purchasing the disk magazine.

This Month

On this month's issue there are some very smart utilities for disk users who are looking for a better way to file information about their library. One of the biggest problems with a large disk collection is finding one particular program amongst several hundred disks.

Disk Filer solves that dilemma by reading your disk directories, filing them, sorting them, and printing out catalogs for each or all of your disks, and Home Inventory, originally planned for our number five issue, is included. A simple program for keeping track of your home contents.

The usual swag of demo's are included - five in all. These are now arriving at such a rate that we can hardly keep up with them. Only the best are

chosen for distribution on the disk mag. All of these are an excellent demonstration of the 64's abilities, as well as a neat way of checking out new games coming soon.

For graphics freaks there's a hot line, colour music program which looks a little like something out of the game *Stix*.

Well, that's just a small sample of what you will find. For a complete look, order your Disk Magazine Number Six issue today!

Amiga Column

by Tim Strachan

Anyone who took a look at PC87 will be convinced that the PC market is alive and booming, and that there's a lot of very desirable hardware and software out there.

It also seems that Commodore and Apple are making the running with their 68000-based machines, specifically the Amiga and the Mac. The capabilities of the Macintosh II, with its open architecture (ie, third-party peripherals can be added on), and its 68020 chip (very fast), are quite awe-inspiring, especially when you consider the large body of software existing for the Mac, some of which will run on the Macintosh II.

... On the other hand, there is the Amiga, which will certainly take a 68020 chip and relish it, is already an open-architecture machine, contains its three custom-designed co-processors (to handle graphics and other tasks while the main CPU carries on), and has a comparatively good price-tag. It's becoming a case of "Desktop Publishing" versus "Desktop Video".

Commodore has really begun to do it right with their Amiga push, in this very competitive market. You'll read else-where how Commodore went through a very lean period up to about a year ago. Dark mutterings were circulating about imminent collapse, no software available for the Amiga, poor targeting of the market, etc. The talk now is about how well they'll perform, and to date it's been good news and is set to be better.

Desktop Video

Firstly, the Amiga is finally being recognised for the revolutionary machine that it is: superior graphics and audio capabilities at last make it possible to talk of real "Desktop Video". That is, the tools are now available, at a comparatively low price, to create animations, graphics, sound, slideshows, and to mix and match and experiment, and get the results onto videotape if you like. No longer is the dedicated, megabuck studio required - the only real obstacle is your imagination, and the time and energy to get it done.

At present many people are playing, experimenting and wondering at the possibilities that have been opened up. TV ads and animations are being created here and overseas, experimental films are being made, and software writers are stretching themselves to write applications that take full advantage of the Amiga's capabilities.

The most significant point is that previously expensive video tools are being placed in the hands of people who would never have dreamed of having them - so there are now a number of elite artforms available to many more people. The results are appearing already. As more people get acquainted with the possibilities, we'll be seeing some stunning stuff.

Australian Commodore Review 24

Tim Strachan - Biopic

Born and raised in New Guinea.

Extensive work and travel

overseas, especially in Europe and South America. Trained in mathematics and acupuncture. Interested in computers in general as all-purpose tools for communication and creativity, in particular the Amiga for "Desktop Video". Looking for ways to make computers more accessible to the average user, hence MEGADISC as a start.

End-user's machine

Another advantage of such a machine is that, while hackers love it, it is an end-user's machine. So many good applications are (and will be) available that the user can get on with the real use of tools that many clever people have spent the best years of their lives perfecting. This is very good news for the 49% of Amiga buyers who've never owned a computer before, and just want to use it to produce, whether it's a video, flash documents, business applications or whatever. And if you've learned to handle one application, you've gone a long way to knowing how to handle the next one, because of the uniform "interface" - ie, the WIMP (Windows, Icons, Mouse, Pull-down menus) environment.

One final, and often overlooked point in favour of the Amiga is its ability to "multi-task". This essentially means that you can be running a number of programs simultaneously, and switch at will from one to another. So you can be printing a picture while you're typing out a document, and can switch also to your outline in your "Idea Processor" whenever you want.

AMIGA COLUMN

The only limitations are whether the programs have been designed to take advantage of it (and the good ones have), and the amount of memory you've got installed. And the rule is, the more the better. You can't run a dragster or a Rolls on a two-gallon tank.

Getting info

So what's happening locally, and where can the end-user get information? There's plenty available now, and there's plenty more coming, and I'll mention a few sources below:

- * You can join the recently established Amiga Club, organised by Craig Tegel at 67 Mars Road, Lane Cove, Sydney. Membership will provide you with discounts on hardware and software, free demo programs, a free software package, a quarterly newsletter, and general user support. It looks like a good proposition.

- * You can buy the all-Australian magazine-on-a-disc called MEGADISC, either by subscription or at your local dealer. It's

full of information, reviews, articles, graphics, animation, utilities, demo programs and more. You can contact the publishers at PO Box 759, Crows Nest, Sydney, 2065. A product well worth supporting.

- * Ask your dealer or the people at MEGADISC about getting copies of the Amiga Library Disks, also called the Fish Disks after Fred Fish (yes, that is his name) who has been responsible for collecting and organising them. And a good job he's done. As of this writing there are 57 available, full of public domain games, utilities, developers' programs, graphics, animations, you name it. All those enthusiastic developers over the last 18 months have been generous enough to let us have the rewards of their labours for the price of a blank disk. For the keen Amiga user, they're a must, even if only for browsing and being amazed.

- * Join or start up an Amiga Users Group or BBS. Already well established are:

1. Australian Amiga Users Association,
Attn: Ray Wilson, Tel: (047) 514 143.
This group also runs a BBS on an Amiga for Amiga users:
Tel: (047) 588 006.
2. Victorian Amiga Users Group,
Attn: Neil Murray
PO Box 109, Nth Balwyn, Vic 3104.
3. Contact BBS in Sydney has an Amiga section run by SYSOP Stephen Williams. Tel: (02) 550 1004.

A full listing of Australian Amiga User Groups and BBSs will appear in the next issue of MEGADISC.

- * Finally, visit your local dealer and buy some of the excellent software available for the Amiga. In spite of early pessimism, such software is obtainable in quantity and quality. A quick list of recommendations:

Scribble II - an excellent Word Processor whose documents can be imported into other programs, such as:

PageSetter - one of the first Desktop Publishing programs for the Amiga, it is reliable, fast, and has many excellent features, including a Text Editor (essentially a Word Processor), a Graphics Editor (a paint program for on-the-spot design), and a lot of flexibility in formatting your documents. It's easy to use and capable of professional-looking documents even on a dot-matrix printer. Graphics can also be imported from:

Deluxe Paint II - definitely the best graphics/paint program available on any personal computer, and voted the best of all programs for the Amiga last year, this is the updated version 2. It's capabilities appear to be endless, and include perspective drawing, special effects, stencilling, use of any brush size and composition, multiple sizing, magnification, and so on. The depth of this program is such that no-one I know has exhausted all its possibilities so far, after months of use. And because of the standardised file formatting on the Amiga system, any graphics from *Deluxe Paint II* can be used in other Amiga programs, such as *PageSetter* above, or:

Aegis Animator and *Deluxe Video Construction Set* - both of these allow you to create animations on screen to be stored on disk or videotape. Very professional results are possible, and each offers its own strengths and advantages.

TUTORIAL

Infocom Four-in-one Sampler Part Four

by J A Salt

ZORK! What can I possibly say that hasn't already been written about this internationally acclaimed fantasy adventure. Available on three separate disks and better known as *Zork I*, *II* and *III*, each part has been created as a unique game in its own right. Seasoned adventurers (masochists) can approach the *Zork Trilogy* as a three-part adventure if they so wish.

The Trilogy was originally the brainchild of four people: Dave Lebling, Mark Blank, Tim Anderson and Bruce Daniels. The excerpt we will be sharing from Infocom's *Four-in-one Sampler* disk this month is from *Zork I* which is classified as a Standard Level game. *Zork II* and *III* are Advanced Level games.

As the excerpt is the opening sequence of this game I can once again extend an invitation to any reader who has the full-length version to join us in this exercise.

Infocom's excerpts for their sampler disk were very carefully chosen to introduce each of the categories their games cover. They are *Planetfall* - a science fiction comedy, *Infidel* - a tale of adventure, *Zork I* - a classic fantasy story and *Witness* - a detective thriller adventure.

Should you have any difficulty in obtaining this disk please contact Computer 1, 202 Alison Rd, Randwick NSW 2031. (02) 398 2315.

Confession Time:

I must first admit to you that of all the Infocom adventures I have played and enjoyed, the *Zork* games were the ones that I would glance at for an hour or so and then slip back into my disk file.

To say I felt intimidated by *Zork* would be an understatement. Whenever I opened a computer magazine a cry for

help would leap out at me from some poor adventurer trapped in The Great Underground Empire, or I'd turn a page only to read a desperate plea for help from some poor deranged person wandering hopelessly through a maze. The more I read the more intimidated I became at the thought of attempting *Zork*.

However, to give credit to this tutorial and to put into practice what I have been encouraging you the reader to do, I have played the excerpt from the sampler disk and can now share my efforts with you.

I must add however, that I personally would not advise a novice player to purchase *Zork* as their first adventure game. Its excellent reputation speaks for itself and it is understandable why so many newcomers would have heard of it. But I would suggest you gain some adventure experience before you tackle this series.

I must also warn you before we go any further that should you start this excerpt and if you have an addictive type personality you may not be able to stop, SO BE WARNED and REMEMBER - ZORK IS A TRILOGY!

Let's Play

"... You are a treasure hunter and have heard of a nearby underground labyrinth that contains vast amounts of

treasure. Naturally, you wish to obtain as much as possible. To measure your success in this treasure hunt, a score is kept; you get points both for finding treasures and for placing them in the trophy case that you will find during the story. Obstacles will lie in your way, but you can overcome them by observing and clear thinking.

"You start the story in front of a large white house, with the entrance to the underground hidden nearby. In this sample of *Zork I*, your goal is to FIND YOUR WAY UNDERGROUND AND GET PAST A RATHER NASTY OBSTACLE TO REACH THE MAIN UNDERGROUND CHAMBERS ..."

Okay, my "simplistic" moves to achieve the above goal were as follows:

Example Zork I Excerpt

North - (north of house)
east - (behind house)
open window
west - (kitchen - 10 points)
west - (living room)
move rug
open trapdoor
take sword and lamp
turn on lamp
go down (cellar - 25 points)
north - (troll room)
kill troll with sword
again
(35 POINTS/13 MOVES)

TUTORIAL

Looks easy, doesn't it? I must be honest and tell you that I sweated blood working through this excerpt. Playing it was fun, but when I attempted to draw my first map I struck problems. Thinking back over my earlier experience with *Zork*, I realised that any intimidation I had felt before had come about through my lack of mapping experience.

Until now, we have dealt with adventures that have shown us how to travel in eight different directions (see Part 3). *Zork I* introduces us to add two additional directions to our list namely "UP" and "DOWN". (See Figure C)

It also introduces us to what could be referred to as "TUNNEL" directions. These are routes that do not comply with the standard commands we have been using so far.

For example: if you wanted to travel from Location A to Location B and it was to the East, you would type GO EAST

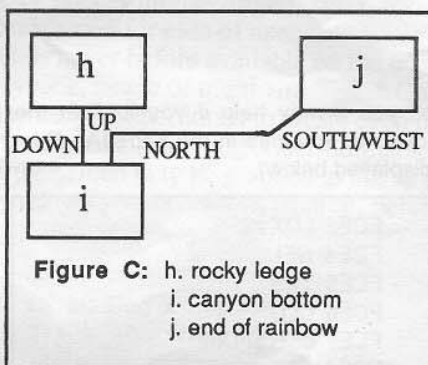

wouldn't you? Then if you wanted to return to Location A from Location B you would expect to be able to GO WEST (See Figure A)

However, at the start of the *Zork I* excerpt you are standing facing the WEST side of the house. If you GO NORTH, you will find yourself standing facing the NORTH side of the house. The same thing applies if you GO SOUTH. If you travel EAST from the NORTH or

SOUTH side of the house, you will arrive facing the EAST side of house. Try drawing these locations first and then continue to ENTER the house. (See Figure B).

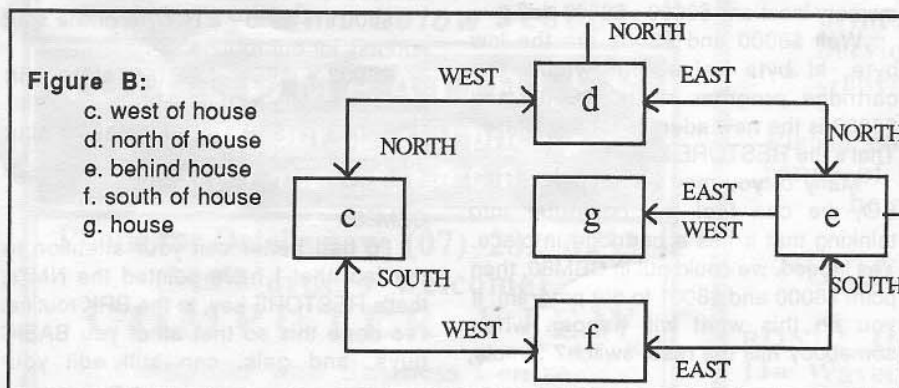

Another type of TUNNEL direction can be examined in this excerpt when you arrive at the CANYON BOTTOM. To

travel from CANYON BOTTOM to reach END OF RAINBOW you can type GO NORTH. However, if you type GO SOUTH to return to CANYON BOTTOM you will be told "you can't go that way". The correct direction needed is SOUTH/WEST. In other words your actual arrival point at the END OF RAINBOW was from a NORTH/EAST direction. (See Figure C)

To help you understand a little better, try and picture MAPPING as follows:

When you draw a map, think of all the lines that connect the locations together as being tunnels, therefore, from the "WEST OF HOUSE" location if you enter a tunnel to the NORTH or SOUTH and although it may twist or turn, if you were really in a tunnel, you would be oblivious to any change in direction. If you examine Figure B you have actually travelled around the corner of the house to reach your next location.

By thinking of mapping in this way, we can neatly side-step the problem of lines changing direction as they link locations. I would always try STANDARD directions first but if you strike any difficulties in getting to or from a location then check for TUNNEL directions.

Be prepared to redraw your maps many times before a sequence is finished. The challenge of creating a fairly accurate map is another reason why I enjoy playing adventure games.

MY CHALLENGE TO YOU:

If you have played the excerpt and realised that my example of moves was indeed a very "simplistic" effort, what I would like YOU to do now is to put into practice what you have learnt from this tutorial. Explore, map and note all the objects and treasures that you can locate in this excerpt. YOUR GOAL FOR ME IS TO OBTAIN A SCORE OF 55 POINTS BEFORE YOU KILL THE TROLL.

This challenge only applies to readers participating in THIS exercise. Should you decide to venture into the full length version of *Zork I* your tactics would be slightly different. (Hint: a certain treasure should perhaps go down into the Underground Empire with you).

REQUEST:

If participants of this exercise would like to share his/her results, I would most certainly like to receive them. *Zork's* directions can be interpreted in many ways and it would be interesting to publish some completed moves and maps. You can forward them to me: J A Salt, c/- The Australian Commodore Review, Top Rear, 4 Carrington Rd, Randwick NSW 2031. For this reason I have not included my completed Excerpt map as I did with *Planetfall* or *Infidel*. I would prefer you to attempt this mapping yourself and perhaps in a later issue we can publish your efforts.

I had intended to conclude this tutorial with the excerpt of *Zork I*. However I have since obtained a full length version of Infocom's mystery adventure *Witness* which is included on the sampler disk but in transcript only. So next issue we will explore *Witness* together. Happy Adventuring.

Anti-Reset Switch Routines

Tired of friends disposing of your beloved program at the press of a switch? Here's something that will give them a little shock. By Jason Briggs.

I'm sure you've seen it before. You take one of your home grown games over to your friend's place, he plays a quick few games, snorts and hits his reset switch. You let out a little sob as the screen moves in, then the computer flicks back to that well known title screen. But wouldn't it be great if he hit his reset switch, the screen cleared, then displayed the message 'THAT WAS REALLY RATHER SILLY'. It's the type of thing that we use in the commercial games designing area. The reset-switch is used by pirates to copy a lot of software, so as games designers we must come up with a way of rendering these devices useless. And believe me, it's not that difficult.

Before we can dive into the heavy stuff, you have to understand how cartridges work. I know that this may seem very distant from reset-switches, but they are in fact linked in very closely. Let's look at what your C64 does when you turn it on.

(1) On power-up, the KERNAL first resets the stack pointer, and clears decimal mode.

(2) The KERNAL then checks for the presence of an autostart ROM cartridge at location 32768 (\$8000). If this is present, then control is handed over to the auto-start cartridge.

Okay, hold it there!!! Let's think about this. First of all what does a reset-switch do when you hit it? Simple, all that it does is cause a short circuit. In other words turns the computer off, then on. It's also worth noting that SYS64738 will do the exact same thing. Secondly, if you were to shove a cartridge in, whilst pressing your reset-switch, then control would of course be handed over to the cartridge. Some of you by this stage may already have the idea, and some will not. To understand more clearly what I'm going to

tell you it may help if you look at the power up routines in the KERNAL Rom (displayed below).

```
FCE2 LDX #$FF
FCE4 SEI
FCE5 TXS
FCE6 CLD
FCE7 JSR $FD02
FCEA BNE $FCEF
FCEC JMP ($8000)
FCEF STX $D016
FCF2 JSR $FDA3
FCF5 JSR $FD50
FCF8 JSR $FD15
FCFB JSR $FF5B
FCFE CLI
FCFF JMP ($A000)
FD02 LDX #$05
FD04 LDA $FD0F,X
FD07 CMP $8003,X
FD0A BNE $FD0F
FD0C DEX
FD0D BNE $FD04
FD0F RTS
FD10 C3,C2,CD,38,30
```

If you follow this routine through you'll see that it checks for five numbers located at \$8004 (32772). These numbers are called CBM80, and are placed at \$8004 when a cartridge is plugged into your 64. Now then, what do memory locations \$8000 - \$8003 do?

Well \$8000 and \$8001 are the low byte, hi byte values for where the cartridge program starts. \$8002 and \$8003 is the new address for the NMI's. That's the RESTORE key.

Many of you may be saying, "SO!" SO, we can fool the computer into thinking that it has a cartridge in place. Yes indeed, we could put in CBM80, then point \$8000 and \$8001 to our program. If you do this what will happen when somebody hits the reset-switch? Simple,

the KERNAL Rom routine will first check for CBM80. Which it will find, mainly because we have just put it there. If the Rom routine does find CBM80 in place, then it will jump to the memory address stored in \$8000 and \$8001. And once again we have pre-adjusted these addresses to point to our program. Really rather easy, don't you think.

However, the program that you are pointing to must be written in Machine Language. For those of you who don't understand Machine Code, just flip to the end of this article. As for the rest of you, well, you can make your program do whatever you want it to. If you aren't too sure about which addresses to change, and how, then just take a look at the following example.

Above is the program that we will use against the reset-switch. If you read it through, you'll notice that it only changes the Border and Screen colours.

Another thing to note is where we have placed the routine in memory. For the sake of being neat I've put it right next to the CBM80 numbers. However, you could place this routine anywhere in memory that you felt like. Just as long as the numbers in \$8000 and \$8001, point to it correctly.

Now that we have the Machine Code routine all fixed up, we'll have to place the correct pointers and CBM80 into memory. This is quite a simple task, but I've still done it for you. (After all this is a demo, isn't it?)

\$8000 - \$09 - Low byte of the start address for our routine.

\$8001 - \$80 - Hi byte of the start address for our routine.

\$8002 - \$66 - Low byte of the start address for our NMI routine.

\$8003 - \$FE - Hi byte of the start address for our NMI routine.

\$8004 - \$C3,\$C2,\$CD,\$38,\$30 - CBM80

I'd had better call your attention to the fact that I have pointed the NMI's, that's RESTORE key, to the BRK routine. I've done this so that all of you BASIC guys, and gals, can still edit your

PROGRAMMING

```

1000  *=$8009
1010  JSR $E544 ;CLEAR THE SCREEN
1020  LDX #$00 ;CLEAR THE X REGISTER
1030  START STX $D020 ;PUT X IN BORDER REGISTER
1040  STX $D021 ;PUT X IN SCREEN REGISTER
1050  INX      ;ADD ONE TO THE VALUE OF X
1060  JMP START ;JUMP TO THE BEGINNING OF THE LOOP
1070  .END

```

programs. However, this can be a rather big mistake at times. Once you have completed writing your program you need a way of locking out the RESTORE key. Well, don't worry about a thing. All you have to do is add two POKES into your program. If you place in POKE32770,71:POKE32771,254 straight after the BASIC loader, it will render the RESTORE key harmless. Well, not harmless. If you do try hitting the RESTORE key, the computer will lock up.

Anyway, back to the task at hand. If we place all of those little numbers, pointers, and routines into those memory locations, then we will have an anti-reset switch computer. Not too bad is it? But

don't take my word for it, Andrew (my esteemed leader) and most other people will tell you that I'm a #\$/!%'&"%, and shouldn't be trusted.

So the following BASIC loader is for all of you out there who either; (A) don't understand Machine Code, or; (B) want to make sure that I'm not being all of those things above. Okay? Good! Type it in and use it. So next time your friend tries to dispose of your program he's in for a shock. And besides it makes you look like a real chip of the board. GET IT? Chip, board that was a joke! Wasn't it, Andrew? Oh, all right. If that's the way you all feel, I'll see you next month.

LOTTOcheck

19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37

for the Commodore 64 & 128 Computers.

LOTTOCHECK is now available in 3 versions:

- TATTSLOTTO (45 numbers),
- GO LOTTO (40 numbers NSW),
- POOLS SIX-38.

- Developed by database and graphics experts, Lottocheck includes a database of all past draws which are analysed for winning combinations. (You update the database as new draws occur).
 - You can select any set of numbers or a System entry and Lottocheck goes through all past draws tallying up all prizes in each division, that would have been won with those numbers. Thus letting you analyse the performance of any set of numbers.
 - You can select random numbers, which appear on screen as bouncing coloured balls.
 - The GRAPH option produces a histogram of the frequencies of numbers drawn, up to the present.
 - The powerful EVALUATE option lets you test theories and predict next weeks draw, using computed rankings of all numbers.
 - Other options include list and print together with the usual database functions ADD, INSERT, MODIFY and DELETE which use professional fullscreen, form-like input screens.
 - Package includes program and data disks plus extensive handbook on Lottocheck, winning strategies, and the maths theory of LOTTO.
- Excellent value, at \$49.50 each version (includes postage), payable by cheque(), money order(), or credit card:

Please charge my Bankcard () Visa card () (tic payment method):

I want the tattslotto(), golotto(), pools six-38() version. (tic one)

Disk Logger Revisited

Paul Blair

Paul Blair explains about a new Disk Logger set up to make the most of the C128 and the 1571 disk drive.

Many moons ago, back in the days when a PET with a 12 inch screen shouted your erudition (and depleted bank balance) to the world, I found a utility program named DISK LOGGER, written by the redoubtable Butterfield J. It was about then that disks became something other than square black things that were held (literally) with reverence, and fed to the gaping maw of a disk drive, there to whizz around and return to me my labours of many hours gone by. They became real, with a charm and personality all their own. They had structure, shape and lots of useful things to stare at and think about.

PET days were easy, apart from my appalling lack of knowledge. Most programs loaded into the computer at specific and easily recognized locations. Nevertheless, Jim's program was one of the keys to improvement, and I used it often to track down the contents of disks - especially those that I had mussed up somehow or other!

Each successive Commodore computer model brought its own disk logger program. By now, computers were getting a little more complex, and some idea of how people were stashing things inside them became more critical. The "evaluation copy" fraternity were becoming a force, and needed to know more. Most of the logger programs were rewrites of the original, with a few personal changes brought on by the addition of colour, and so on. Few, if any, changed the program's flow, because it was the sort of program where improvement was not needed.

The Commodore 128 changed that a bit, particularly when lashed up to a 1571 disk drive. New words like "burst" became more frequent in the articles we all read, and the Immers/Neufeld combination convinced us that shoving some machine code into the disk drive could perform minor miracles if done

```
100 REM: C128/1571 DISK LOGGER

340 OPEN4,Z:OPEN15,U,15,"UOL"
```

correctly. So what could be made of all that?

The simple answer is - a new Disk Logger (now you can let your breath go!) that is set up to make the most of the C128 and the 1571. Let me explain as we go along.

Fingers ready? Fine . . . A few notes to help me sometime in the future when I wonder just what I did.

```
350 PRINT"[DOWN]READING DIRECTORY":SYS6144:BANK0:
PK=12288:REM $3000
360 IFPEEK(PK+3)=128THENTB=1328:REM 2 SIDES

420 M=M+1:IFM=1THENNT=PEEK(PK):NS=PEEK(PK+1):IFNT=0THENLT=1
430 K=PEEK(PK+2)-128:IFK<1ORF<4THENK=0
```

The program uses a bit of machine code to speed things up. The first block (read in at line 300) is my version of a burst read routine, in this case to read in all of the directory on Track 18 to computer memory. This means that we have a lot of the information we need only a PEEK away.

This is where the directory action really begins. Line 390 gets the disk name and ID, so now we start looking through the part of the directory where program details are stored (Track 18, Sector 1 is the first such sector).

With the directory held in computer memory, we no longer have to GET our information from disk. We simply look around the stored directory, PEEKing at this and that to get what we want.

Having printed out the starting track and sector, the file type (SEQ, PRG...) and the filename, we can get down to work in earnest. To get the load address of PRG files, we need a couple of bytes off disk. We open the file, and read them in at line 560.

Dealer Directory

Cockroach Turbo-Rom

Price: \$42 (inc. postage etc.)
Speed up program loading and saving with TURBO-ROM, available for C64, SX, 128, 1541, 1570/1. Works with 1 or 2 Drives. Vic switch compatible. Does not tie up cartridge socket. Works with printer connected. (Some fast loaders don't).
COCKROACH SOFTWARE,
PO BOX 1154,
SOUTHPORT, 4215.

The Sultan's Palace

Commodore 64/128

The \$1000.00 Reward for completing *Sultan's Palace* has been claimed by Chris Hamilton of Wangi-Wangi, NSW.

"Even though the reward has gone I am convinced by the tremendous feedback I have had about the program that it will continue to do well and provide many happy hours of Adventuring to all those who (like myself) love playing Adventure/Arcade games."

Price has now been discounted to \$19.95 and the game is available from:

Gary McCleary Software
PO Box 24,
Emu Plains, NSW 2750.

Commodore 64/128

Maths Pack

A must for any student of mathematics at high school or university level.

- * Graph any function (X-Y or Polar co-ordinates)
- * Numerical integration/differentiation/ equation solving
- * Solve simultaneous equations (with up to 40 equations and 40 unknowns)
- * Numerical solution of first order differential equations
- * Least square curve fitting
- * Transform and graph any conic
- * Infinite series summation
- * Calculate loan repayments

Star Pack

- * A planetarium display of the heavens from anywhere on earth
- * Locate any object anywhere any time
- * Easy to follow instructions

Talking Sam

- * Is this artificial intelligence on the Commodore 64?

3 in 1 offer includes all three programs on one disk for \$24.95 from

Gary McCleary Software,
PO Box 24, Emu Plains, NSW 2750.

Listing explanations

If you have entered programs from various publications you will have often encountered numerous symbols and strange characters which are unique to Commodore computers.

These are usually special control codes which might tell your computer to clear the screen, change colours or position the cursor. They are difficult to reproduce in a magazine and can often

lead to mistakes in entering a program.

Here is a handy list of the control code abbreviations used throughout this issue and all subsequent issues of this magazine. Without them we would have to fill up the program pages with the usual illegible reverse graphics symbols produced by Commodore printers.

Because so many readers have misunderstood this in other magazines

let us spell it out in detail.

When you are entering any of the programs in this issue - or any other issue for that matter - type in the program as normal except when any abbreviations appear in brackets in a listing.

Then type the corresponding key strokes as listed in the example below.

| | |
|--|---|
| 10 rem explanation of listing | 44 print"{WHT} - commodore and white" |
| 12 rem | 46 print"{RED} - commodore and red" |
| 14 print"{CLR} - shift and clr/home" | 48 print"{CYAN} - commodore and cyan" |
| 16 print"{HOME} - clr/home" | 50 print"{PURP} - commodore and purple" |
| 18 print"{C/DN} - cursor down" | 52 print"{GRN} - commodore and green" |
| 20 print"{C/UP} - cursor up" | 54 print"{BLUE} - commodore and blue" |
| 22 print"{C/RT} - cursor right" | 56 print"{YELO} - commodore and yellow" |
| 24 print"{C/LF} - cursor left" | 58 print"{RVOF} - ctrl and rvs/off" |
| 26 print"{BLK} - ctrl and black" | 59 print"{RVON} - ctrl and rvs/on" |
| 28 print"{WHT} - ctrl and white" | 60 print"{F1} - function one" |
| 30 print"{RED} - ctrl and red" | 61 print"{F2} - function two" |
| 32 print"{CYAN} - ctrl and cyan" | 62 print"{F3} - function three" |
| 34 print"{PURP} - ctrl and purple" | 63 print"{F4} - function four" |
| 36 print"{GRN} - ctrl and green" | 64 print"{F5} - function five" |
| 38 print"{BLUE} - ctrl and blue" | 65 print"{F6} - function six" |
| 40 print"{YELO} - ctrl and yellow" | 66 print"{F7} - function seven" |
| 42 print"{ORNG} - commodore and black" | 68 print"{F8} - function eight" |

Reader Contributions

Many of our readers have inquired as to the acceptability of reader contributions. Well, the short answer is we will give consideration to most submissions provided they arrive in a format that is both readable and understandable.

Although we do have a swag of regular columnists, new talent is always waiting to be discovered - so please don't hesitate to send us your ideas, or contributions.

We produce a total of three computer magazines - *The Australian Commodore Review*, *The Australian Apple Review* and *Home Computer GEM* - so if you can't find a home in this publication, there may well be room elsewhere.

Submissions should be addressed to the attention of Andrew Farrell, and may

be either typed double spaced on plain sheets of paper, or on IBM, Commodore or Apple Macintosh format disks. Alternatively you may with prior arrangement transfer copy directly into our computers via modem.

Style should be non-technical unless you are covering a specifically technical subject - in which case any obscure terminology should be fully explained.

Humour may be included in controlled doses. Try to be entertaining as well as informative.

If you include maps or diagrams they should be clearly labelled, and drawn in a dark black felt tip pen about twice the size you intend them to be reproduced. Freehand sketches tend to look twice as bad when printed, so use a straight edge on all lines that should be straight.

Labels should stand clear of the actual drawing so that we may typeset them if required.

We cannot accept responsibility for the loss of any materials, so don't send us your original. Make a copy, and if you're posting it, be sure to protect disks or photographs in a solid cardboard surround.

Payment for articles should be discussed with the editor, however as a rough guide they range between \$40 and \$60 per page of text. It won't make you rich, but there are a lot of other perks associated with writing for us. Be sure to include your home and work telephone numbers if you expect to be contacted with regard to any immediate queries - the editor rarely writes letters, not even to his own mother.

WIN A FAMILY PACK!

If you don't want a Commodore 64C, a Datasette, 2 Joysticks, 2 Paddles, 4 Games, and a subscription to Australia's most widely read Commodore magazine, then you should not be reading this, because if you take out a subscription to *Australian Commodore Review* before 20th April 1987 you could win a Commodore 64C, a Datasette, 2 Joysticks, 2 Paddles, 4 Games, and a subscription to Australia's most widely read Commodore magazine. *Now wouldn't that be just fine?*

The winner of the draw made on April 20 will be announced in our May issue, and the winner of the draw to be made on June 19 will be announced in our July issue

Send in your subscription NOW and be included in our draw to win a Commodore Family Pack.

A draw will be made on April 20th 1987 and the result will be published in our May issue, but if you miss out on that date, don't despair, another draw will be made on June 19 from the subscriptions received between April 20 and June 19.

The winner of either draw will receive a Family Pack including all the goodies mentioned above, and we will return his or her subscription fee.

Win a Family Pack for yourself, or for a friend or a relative - especially a young relative - it's a terrific way to start!

Subscribe now and have a chance to win a
Commodore Family Pack

EDIT
EXPI

SHORT CIRCUIT™

It was a one in a million accident - but Number Five, designed to be a strategic artificially intelligent weapons system, the most sophisticated robot on the planet, has escaped - and has come to the conclusion that he's alive! Now the scientist who put him together wants to take him apart again to find out what went wrong. The President of Nova Robotics wants to capture him before the weapons he's carrying kill millions of civilians. And the security chief wants to blow him up so that he can get home in time for dinner.

YOU are Number Five . . . **You** are alive and **YOU** have got to stay that way!
